

## **Sol-3 launches new FIX broker interface to trade US equity options from Europe**

Today the independent trading software vendor Sol-3 announces a new trading connection to trade US equity options via a FIX 4.2 broker connection. Market and reference data are available using existing interfaces to data vendors.

Now Sol-3 customers can use all trading functions from the Sol-3 trading application for trading US equity options, which includes click trading, order-, position- and trade-management, sophisticated vola curve management, precise options price calculations, portfolio- and risk-management.

Norbert Geus, Managing Partner Sol-3, says: *"In today's exchange trading, our clients are constantly looking for new opportunities and niche markets to leverage their existing tools, skills and know-how and use it for other profitable markets. The US equity option market is another important milestone for us and now we have been able to close a gap that had been on our customers' wish list."*

### **About Sol-3:**

For more than 20 years Sol-3 has been a software specialist of sophisticated exchange trading systems for professional electronic trading. The software product is specifically designed to meet the needs of proprietary trading firms, with a clear focus on trading speed. Especially equity and derivatives traders, market makers, arbitrage traders and algo-traders will mostly benefit from these key advantages. In addition to all essential manual trading functions, the system offers precise theoretical price calculations for derivatives, automatic quote management for market-makers, automatic rule-based trading on market opportunities and a very fast and flexible order /quote management to exchanges, order routing systems and brokers. Customers benefit from comprehensive customer service, deep technical expertise and the experience of numerous projects connecting trading companies to electronic exchanges worldwide.
